

UPDATE FIRMWARE OFFLINE

It is possible to update the firmware offline by connecting a USB memory storing the firmware installer to the total station. The installer can be downloaded from the TSshield web site.

- When updating the firmware, attach a fully charged battery to the total station or use the external power source adapter (special accessory).
- When updating, use a blank USB memory.
- Notice of update information, that is displayed turn on the total station, does not displayed the day after the software update. Instrument Info of the TSshield is also renewed on the day after the software update.

1. Download the installer

Download the firmware's installer (Setup.exe) from the TSshield web site.

- Press [More info] for the instrument to update the software on the Dashboard.
Press [Download] in the "SW Version".

The screenshot shows the 'Instrument page' of the TSshield web interface. On the left, there's a sidebar with 'Dashboard' and 'Map' options. The main area has sections for 'General Information' (showing a thumbnail of a total station, Series: SW, Model: SW-105, Language: English, S/N: 000001, Activation code: 1234567890) and 'History' (Last Access Date: 2012-03-29 09:03:47, User Registration Date: 2012-12-17 11:38:06, Total Hours: 0 Days 00:00:00). Below these is 'Instrument Settings' (Setting: Normal, Set, Setting Date: 2014-10-01 11:46:18). On the right, under 'SW Version', there are tabs for 'Version' (Latest), 'Display', 'History', and 'Download' (which is circled in red). Below the tabs, it says 'Common SW: Latest' and 'Option SW: Latest'.

- Click the link for the file to download in the window below.
Follow the instructions on the screen to download the file.

The screenshot shows a 'Download' dialog box. It features a thumbnail of a total station and a list of files. The first item is '1. Install manual Firmware_Update.pdf [648.03 KB]'. Below it is '2. Installer (2014/01/16)' followed by a blue link 'Setup.exe [2x 18 MB]' which is circled in red.

- A warning message may appear depending on the browser in use or the settings of the PC; however, the downloaded file does not have a problem.

Reference: On Internet Explorer

Click the [x] button to exit the message.

The screenshot shows a browser download warning message. It says 'Setup.exe is not commonly downloaded and could harm your computer.' At the bottom are buttons for 'Delete', 'Actions', 'View downloads', and a red 'x' button which is circled in red.

2. Save the installer to a USB memory

Save the downloaded file (Setup.exe) in the route folder of a USB memory.

- If the destination to save downloaded files is not changed, the downloaded file is saved in "Download" folder.

3. Connect the USB memory to the total station

Connect the USB memory to a USB port of the total station.

4. Execute update

After confirming that the total station has a sufficient battery level, press the power switch while pressing [\odot] and [\circlearrowleft]. The installer automatically starts. Select [YES] to start update.

5. Exit update

When update is completed, the total station automatically restarts.
